Задание №3

“Less drugs, less hospitalizations”

Our primary mission is completely outcome-focused, how we approach our care is geared towards a systemized, health cost reduction model ensuring optimized patient care and enhancing the overall operational synergy within the facilities we serve, helping them outperform their goals and enable best practice.

We see ourselves as a truly collaborative partner with our facilities within the post-acute function. Through our proven intra-disciplinary and multi-speciality approach towards patient care we work to heighten the stabilization of patient care – significantly reducing hospitalizations, urgent care visits and the dependency on poly-pharmacy by preventing illnesses, promoting wellness, providing timely acute care, and engaging in appropriate management of chronic illnesses, while ensuring that residents and caregivers are fully-informed and involved in the development of care plans.

75%

Decrease

Typical decreases of 50-75% in nursing home antipsychotic rates after beginning our integrated, speciality care services.

50%+

Reduction

Common reductions of 50-100% in PRN psychotropics post-implementation of the Eventus WholeHealth Model.
